

Level Control Valve with Bi-Level Altitude Control

Model 750-86

- High level reservoirs & water towers
- Energy cost critical systems
- Systems with poor water quality
- Inherent refreshing
- Low noise generation

The Model 750-86 Level Control Valve with Bi-Level Altitude Control is a hydraulically controlled, diaphragm actuated control valve that shuts off at pre-set reservoir high level and fully opens at pre-set low level, as sensed by two 2-Way high sensitivity altitude pilot mounted on the main valve.

Features and Benefits

- Line pressure driven – Independent operation
- Bi-level altitude pilot
 - No float, simple installation
 - On/Off service
 - No cavitation damage
 - Suitable for low quality water
 - Reservoir inherent refreshing
- **Double chamber design**
 - Moderated valve reaction
 - Protected diaphragm
- **External installation**
 - Easy access to valve
 - Easy level setting
 - Less wear and tear
- **Balanced seal disk** – High flow capacity
- **In-line serviceable** – Easy maintenance
- **Flexible design** – Easy addition of features

Major Additional Features

- Pressure sustaining – **753-86**
- Flow control – **757-86-U**
- Closing surge prevention – **750-86-49**
- Level sustaining – **75A-86**
See relevant BERMAD publications.

Operation

The Model 750-86 adds a low level setting feature to the standard Altitude Control Valve. A high level pilot [1] and a low level pilot [2] are adjusted to open at different settings. Should the static head rise to the closing set point, the high level pilot opens causing the main valve to close. Should the static head drop to the opening set point, the low level pilot opens causing the main valve to open. When the level is between pilot settings, both pilots are closed and the main valve remains in its last position. The 3-Way cock valve [3] enables manual closing of the main valve.

Pilot System Specifications

Standard Materials:

Pilot:

- Body & Cover: Brass or Stainless Steel
- Elastomers: Synthetic Rubber
- Spring: Galvanized Steel or Stainless Steel
- Internal parts: Stainless Steel
- Diaphragm Covers: Fusion bonded epoxy coated Steel or Stainless Steel

Tubing & Fittings:

Stainless Steel 316 or Copper & Brass Open

Accessories:

Stainless Steel 316, Brass and Synthetic Rumsbber Elasto

Altitude Adjustment Range:

Code	Meter	Feet
M1	2-6	7-20
M6	2-14	7-46
M5	5-22	17-72
M4	15-35	49-115
M8	25-70	82-230

Notes:

- Recommended continuous flow velocity: 0.3-6.0 m/sec ; 1-20 ft/sec
- Minimum operating pressure: 0.7 bar ; 10 psi. For lower pressure requirements consult factory

Typical Applications

Bi-Level Water Towers

The Model 750-80-X senses the static head of the water level in the tank by means of a high sensitivity pilot. To do so accurately, the sensing tube end must be connected to a “still point” at the bottom of the tank. The drainage pipe provides this “still point,” a location not influenced by flow velocity as in filling and outflow pipes.

Level Control and Pressure Sustaining Valve with Bi-Level Altitude Control Model 753-86

The Model 753-86 adds the Bi-Level altitude control feature to the Model 730 Pressure Sustaining Valve for applications where prioritizing consumers over reservoir filling is needed.

Level and Flow Control Valve with Bi-Level Altitude Control Model 757-86-U

The Model 757-86-U adds the Bi-Level altitude control feature to the Model 727-U Flow Control Valve.

Technical Data

Size Range: DN40-900 ; 1 1/2-36"

End Connections (Pressure Ratings):

Flanged: ISO PN16, PN25 (ANSI Class 150, 300)

Threaded: BSP or NPT

Others: Available on request

Valve Patterns: "Y" (globe) & angle, globe (DN600-900 ; 24"-36")

Working Temperature: Water up to 80°C ; 180°F

Standard Materials:

Body & Actuator: Ductile Iron

Internals: Stainless Steel, Bronze & coated Steel

Diaphragm: Synthetic Rubber Nylon fabric-reinforced

Seals: Synthetic Rubber

Coating: Fusion Bonded Epoxy, RAL 5005 (Blue) approved for drinking water or Electrostatic Polyester Powder

Differential Pressure Calculation

$$\Delta P = \frac{Q}{(Kv; Cv)^2}$$

ΔP = Differential Pressure for fully open valve (bar; psi)

Q = Flow rate (m³/h; gpm)

Kv = Metric system - valve flow coefficient
(flow in m³/h at 1 bar ΔP with 15°C water)

Cv = US system - Valve flow coefficient
(flow in gpm at 1 psi ΔP with 60°F water)

$$Cv = 1.155 Kv$$
