

**400Y Series** 

# Hydraulically Controlled Deluge Valve with Local Reset

# Model FP 400Y - 1M

The BERMAD model 400Y-1M is an elastomeric, hydraulic, line pressure operated deluge valve, designed specifically for advanced fire protection systems and the latest industry standards.

The 400Y-1M is activated by a pressure drop in a fusible plug wet pilot line. Once open the 400Y-1M latches open until locally reset.

The optional valve position indicator can include a limit switch suitable for Fire & Gas monitoring systems.

The 400Y-1M is ideal for systems with open nozzles for water or foam discharge.

#### **Benefits and Features**

#### Safety and reliability

- □ Time proven, simple, fail-safe actuation
- Single piece, rugged elastomeric diaphragm seal -VRSD technology
- Obstacle-free, uninterrupted flow path
- No mechanical moving parts
- Latches open until reset locally
- Valve position limit switches (optional)
- Local valve position indicator beacon (optional)

# High performance

- Very high flow efficiency
- Straight through flow Y- type body
- Approved for PN25 / 365 psi

#### Designed for fire protection

- □ Face-to-face length standardized to ISO 5752 / EN558-1
- Designed to meet the requirements of the industry standards

## Quick and easy maintenance

- □ In-line serviceable
- □ Fast and easy cover removal
- Swivel mounted drain valves \*

## **Typical Applications**

- Hydraulic remote controlled systems
- Automatic water spray
- Foam applications
- Corrosive water systems

# **Approvals**

UL-Listed Special System Water Control Valves, Deluge Type (VLFT) Sizes 3" - 10"

FM Approved for Deluge Sprinkler Systems Sizes 1½" - 8"

Det Norske Veritas Type Approval

ABS American Bureau of Shipping Type Approval

Lloyd's Register Type Approval

# **Additional Features**

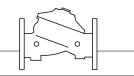

- Valve position limit switches
- Local valve position indicator beacon
- Sea water compatibility
- Drain valve/s inlet/outlet

<sup>\*</sup> not including 1½" & 2" valves

Model FP 400Y - 1M 400Y Series

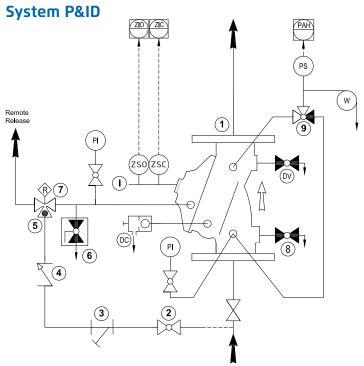

# **Operation**

The BERMAD model 400Y-1M is held closed by water pressure in the control chamber [1]. Upon release of pressure

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] and strainer [3], restriction orifice [5] and is then trapped in the control chamber by a check valve [4], manual emergency release [6] and the easy-lock manual reset valve [7]. The water pressure trapped in the control chamber of the deluge valve holds the diaphragm against the valve seat, sealing it drip-tight and keeping the system pipes dry.

Under FIRE conditions, water pressure is released from the control chamber, either with the manual emergency release, or by a release of water pressure of the hydraulic fusible plug pilot line [8], this increase in flow switches the easy-lock to close releasing pressure from the valve control chamber and thereby opening the deluge valve, allowing water to flow into the system piping and to the alarm device [9]. Once open the 400Y-1M latches open and can only be closed locally by manually depressing the easy-lock reset button.

#### Components

- 1 BERMAD 400Y Deluge Valve
- 2 Priming Ball Valve
- 3 Priming Strainer
- 4 Check valve
- 5 Restriction Orifice
- 6 Manual Emergency Release
- 7 Easy-Lock Manual Reset

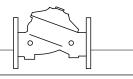

#### **Optional System Items**

- ZS Limit Switch Assembly
- I Visual Indicator
- DV Additional Drain/Test Valve
- PS Pressure Switch
- W Water Motor Alarm
- PI Pressure Gauge\*
- 8 Drain Valve\*
- 9 3 Way Alarm Test Valve\*
- DC Automatic Drip Check Valve\*

# **System Installation**

A typical installation of the BERMAD model 400Y-1M, features automatic actuation by way of a fusible plug wet pilot line. It can also be triggered manually using the local manual emergency release. When open and fitted with a limit switch the valve can send a feedback signal to a remote valve status monitoring system.

#### **Engineering Specifications**

The deluge valve shall be UL-listed and FM-approved, 25-bar/365-psi rated, with a straight-through, Y-type-body. The valve shall have an unobstructed flow path, with no stem guide or supporting ribs.

Valve actuation shall be accomplished by a single-piece, rolling diaphragm bonded with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.

The deluge valve shall include an Easy-Lock latching valve, a Y-type strainer, a ball drain valve, an automatic drip-check with manual override, 4-inch pressure gauges, and a manual emergency release housed in a stainless steel box.

The valve drain socket shall be flanged and have 360-degree swivel.

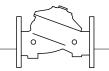

The valve shall be equipped with a protective-covered, dual-color, rotational position indicator, readable from 50 meters, and with two limit switches enclosed in a protective switch box.

Removing the valve cover for inspection or maintenance shall not require removing the control trim.

The deluge valve and its entire control trim shall be supplied pre-assembled and hydraulically tested by a factory certified to ISO 9000 and 9001 standards.
