

BERMAD Buildings & Construction

Water Control Solutions in a Mixed Use Building

In the Core of a Successful Project Runs a Smart Design

1 Recycled Water System

Teated Recycled water for sanitation use - using cooling towers water for toilet flushing, floors washing and irrigation.

2 Cooling Towers - HVAC System

Cooling towers system - Control Valves for Make-Up water, Balancing and Controlled Bleeding.

3 Vertical Irrigation

Vertical Irrigation Valves array - utilizing condensate from the cooling towers the system provides regulated pressure and complete control of irrigation in multiple pressure zones.

4 Chiller Room - HVAC System

Chillers machine room, individual Chiller Flow & shut off Control, Energy measurement. Balancing between Supply and Return by pressure differential control at end of circulating lines (roof top). Cooling Towers return line flow balance.

5 Pressure Reducing System - Fire Protection

Fire Protection Pressure Reducing system for lower floors in a commercial complex incorporating fail-safe redundancy and pressure relief.

6 Pump Station - Fire Protection System

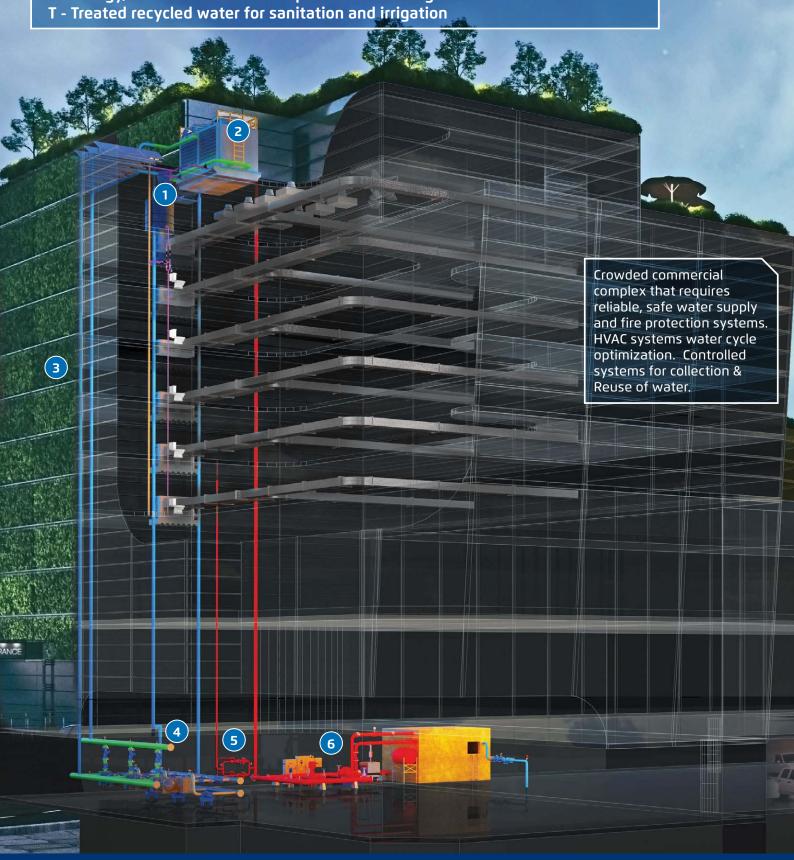

Basement pump room - Reservoir level control with overflow protection, fire protection pumps system with pressure relief valves optional for direct pumping - Suction Control.

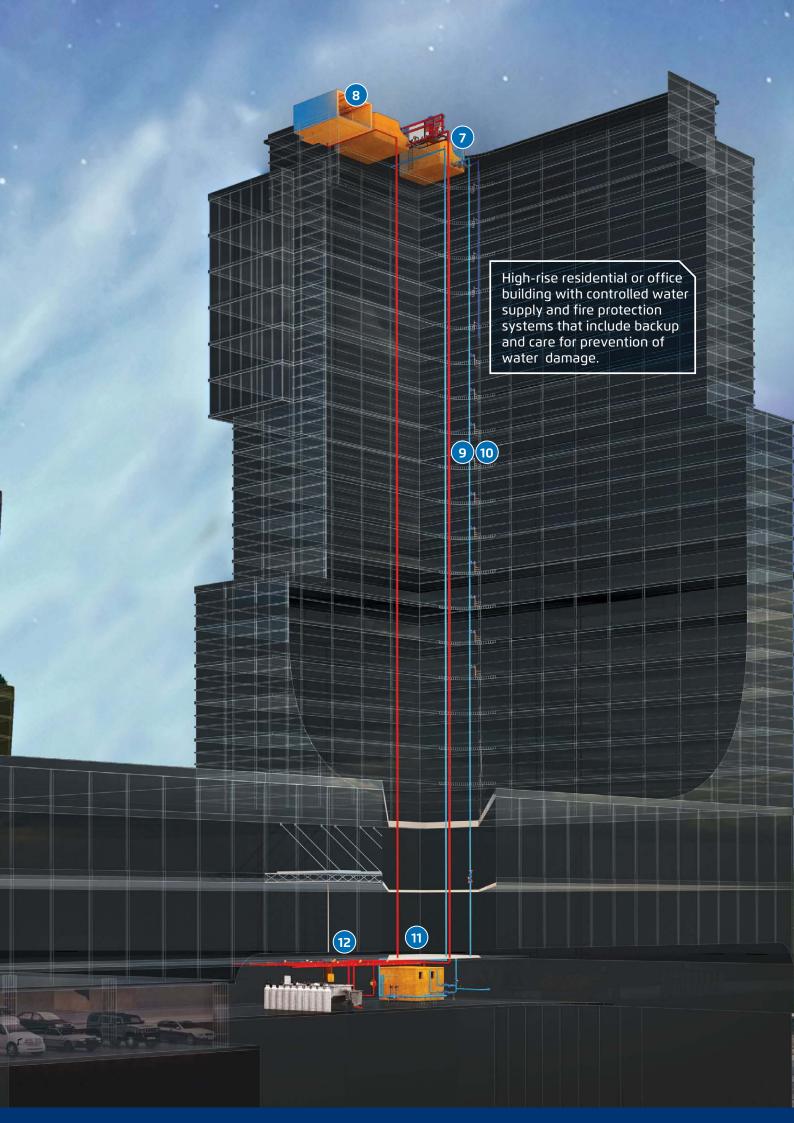

Standout products with a committed professional team behind it.

BERMAD Control valves & support systems provide safe, un-interrupted and hygienic water supply solutions in:

- P Potable Water Level and pressure control
- F Fire protection Pressure & Deluge applications
- E Energy/HVAC Main lines independent Balancing and flow control

Roof Top Reservoir & Pump Station

Roof-top Potable Water and Fire Protection reservoirs, Level Control with Backup and Overflow Protection systems, Pumps Station for upper floors boost, Pressure Relief valves.

Pre-Action in Elevator; Technical Room

Fire Protection System for elevator machine room, Pre-Action System, Protection with minimal water damage risk.

On-Floor PRV System

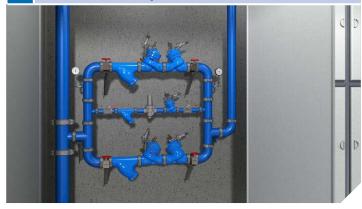

On Floor system supply, secured Pressure Reducing individual direct Pressure System for Potable water.

On Floor system supply, Reducing valve for Potable water.

10 On-Floor PRV System

Potable Water Multi Zone Supply PRV Station with redundancy back-up branch and secured excessive pressure emergency valve – High pressure protection with no water discharge.

Basement Reservoir - Potable Water

Basement Pump Room, Potable water Reservoir Filling and Level Control System, Pump-Control valves and Active Check valves for Surge prevention, Pressure Relief valve.

High Risk Area - Deluge System

Deluge Systems for fire outburst prevention and isolation in high risk flammable area.
