### **BERMAD** Irrigation

400 Series

Pressure Relief/Sustaining

# Pressure Relief/Sustaining Valve

with Solenoid Control

### IR-430-55

The BERMAD Model IR-430-55 is a hydraulically operated, diaphragm actuated control valve that can fulfill either of two separate functions. When installed in-line, it sustains minimum preset upstream (back) pressure.

When installed as a relief or circulation valve, it relieves line pressure in excess of preset.

The BERMAD Model IR-430-55 either opens or shuts in response to an electric signal.

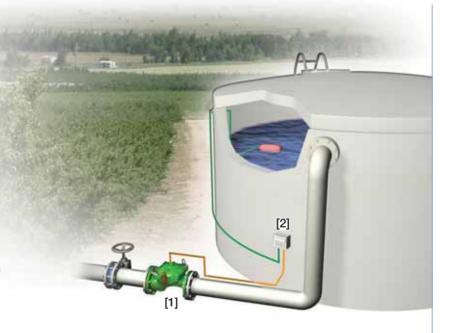

### Features and Benefits

- Line Pressure Driven PSV Electrically Controlled On/Off
  - Controls system fill-up
  - Relieves excessive pressure protecting pump and system
  - Switches between pressure regimes
  - □ Wide range of pressures and voltages
- Advanced Globe Hydro-Efficient Design
  - Unobstructed flow path
  - Single moving part
  - High flow capacity
- Fully Supported & Balanced Diaphragm
  - Requires low actuation pressure
  - Excellent low flow regulation performance
  - Progressively restrains valve closing
  - Prevents diaphragm distortion
- Simple In-line Inspection and Service

### **Typical Applications**

- Downhill Supply Lines Emptying Prevention
- Systems with Various Pressure Regimes
- Line Fill-Up Control
- Backup for Reservoir Supply Valves
- Pump Overload and Cavitation Protection
- Pump Minimum Flow Safeguard
- Excessive Line Pressure Protection

- [1] BERMAD Model IR-430-55 sustains minimum preset supply pressure prioritizing irrigation over reservoir fill-up, and supplies electric backup to the level control system.
- [2] Bi-Level Float Switch Model "65".

Pressure Ratings: 16 bar; 232 psi

Operating Pressure Range: 0.5-16 bar; 7-232 psi For lower pressure requirements, consult factory Setting Range: 1.5-16 bar; 22-232 psi

Setting ranges vary according to specific pilot spring. Please consult factory.

### Materials:

**Body and Cover:** 

Polyester Coated Cast or (10"; DN250 and larger) Ductile Iron

Spring: Stainless Steel

Diaphragm: Nylon fabric Reinforced NR with rugged insert

Bolts, Studs and Nuts: Zinc-Cobalt plated Steel

Control Accessories: Brass

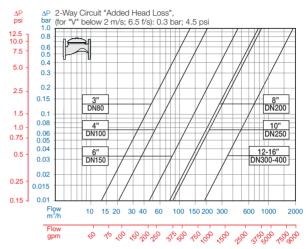

Tubing and Fittings: Reinforced Plastic and Brass

Solenoid Voltage Range:

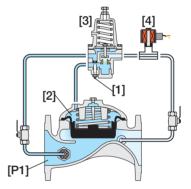

24 VAC, 24 VDC Other voltages available

Hoш to Ord∈r

### Flow Chart

### Operation

The Needle Valve [1] continuously allows line pressure into the Control Chamber [2]. The Pressure Relief/Sustaining Pilot [3] which senses Upstream Pressure [P1] and the Solenoid [4], together control outflow from the control chamber. The pilot throttles when [P1] drops below setting\*. Pressure then accumulates in the control chamber causing the Valve to throttle closed maintaining [P1] at pilot setting, and eventually closing drip-tight. The pilot releases accumulated pressure when [P1] rises above setting, thereby causing the Valve to modulate open. Closing the solenoid shuts off the Valve.

Please specify the requested valve in the following sequence: (for more options, refer to Ordering Guide.)

<sup>\*</sup> Sustaining (In-Line) Valve Pilot should be set to minimum system pressure allowed. Relief (Circulation) Valve Pilot should be set slightly above system working pressure.
