BERMAD Irrigation

400 Series

Pressure Reducing Drip-Tape

Pressure Reducing Valve

with Solenoid Control for Drip-Tape Applications

IR-420-55-bK

The BERMAD Model IR-420-55-bK is a hydraulically operated, diaphragm actuated control valve that accurately reduces higher upstream pressure to very low and stable preset downstream pressure regardless of fluctuating demand, or varying upstream pressure. It either opens or shuts in response to an electric signal.

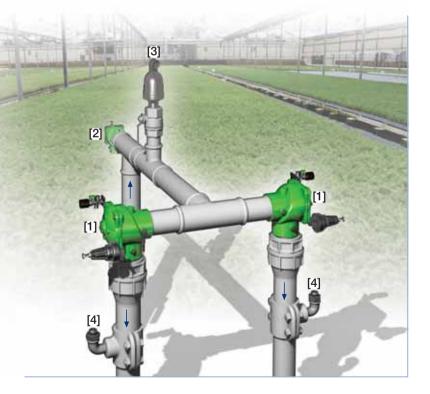

Features and Benefits

- Line Pressure driven, Solenoid Controlled PRV
- Protects downstream systems
- Pressure Reducing Servo Pilot Controlled
- Dynamic integrated needle valve
- Settable to 0.5 bar; 7 psi
- Very low hysteresis
- Advanced Globe Hydro-Efficient Design
- Unobstructed flow path
 - Single moving part
 - High flow capacity
- Fully Supported & Balanced Diaphragm
 - Requires low actuation pressure
 - Excellent low-flow regulation performance
 - Progressively restrains valve closing
 - Prevents diaphragm distortion
- User-Friendly Design
 - Easy pressure setting
- Simple in-line inspection and service

Typical Applications

- Computerized Irrigation Systems
- Drip-Tape Systems
- Low Set Pressure Applications
- Remote and/or Elevated Plots
- Distribution Centers
- Low Supplied Pressure Irrigation Systems

- [1] BERMAD Model IR-420-55-bK opens in response to electric signals, and establishes pressure reduced zone protecting laterals and distribution line.
- [2] BERMAD Relief Valve Model IR-43Q-K
- [3] BERMAD Air Valve Model ARA-A-P-P
- [4] BERMAD Vacuum Breaker Model ½"-ARV

Pressure Rating: 10 bar; 145 psi

Operating Pressure Range: 0.5-10 bar; 7-145 psi For lower pressure requirements, consult factory

Setting Range: 0.5-1.7 bar; 7-25 psi

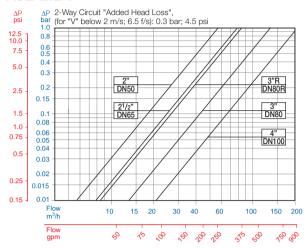

Setting ranges vary according to specific pilot spring. Please consult factory.

Solenoid Voltage Range:

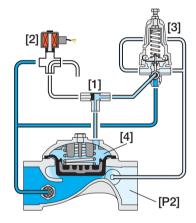

S-390 & S-400: 24 VAC, 24 VDC S-392 & S-402: 9-20 VDC, Latch S-982 & S-985: 12-50 VDC, Latch

Other voltages available.
For full electric data, refer to Accessories Section.

Flow Chart

Operation

The Shuttle Valve [1] hydraulically connects the Solenoid [2] or the Pressure Reducing Servo Pilot (PRSP) [3] to the Valve Control Chamber [4]. When the solenoid is closed, the PRSP commands the Valve to throttle closed, preventing Downstream Pressure [P2] from rising above pilot setting. In response to an electric signal, the solenoid switches, directing line pressure thought the shuttle valve into the control chamber. This causes the Valve to shut. The solenoid also features local manual closing.

How to Order

Please specify the requested valve in the following sequence: (for more options, refer to Ordering Guide.)
