

## Electrically Controlled Deluge Valve with Local Reset

### Model FP 400Y - 2M

The BERMAD model 400Y-2M is an elastomeric, hydraulic, line pressure operated deluge valve, designed specifically for advanced fire protection systems and the latest industry standards.

The 400Y-2M is activated by a 2-Way solenoid valve. Once open the 400Y-2M latches open until locally reset.

The optional valve position indicator can include a limit switch suitable for Fire & Gas monitoring systems.

The 400Y-2M is ideal for systems with open nozzles for water or foam discharge and is available with electrical components to suit any hazardous location.

(for Illustration Only)

### Benefits and Features

- **Safety and reliability**
  - Time proven, simple, fail-safe actuation
  - Single piece, rugged elastomeric diaphragm seal - VRSD technology
  - Obstacle-free, uninterrupted flow path
  - No mechanical moving parts
  - Latches open: remains open until reset locally
  - Valve position limit switches (optional)
  - Local valve position indicator beacon (optional)
- **High performance**
  - Very high flow efficiency
  - Straight through flow Y- type body
  - Approved for PN25 / 365 psi
- **Designed for fire protection**
  - Face-to-face length standardized to ISO 5752 / EN558-1
  - Meets the requirements of the industry standards
- **Quick and easy maintenance**
  - In-line serviceable
  - Fast and easy cover removal
  - Swivel mounted drain valves \*

\* not including 1½" & 2" valves

### Typical Applications

- Electric fire detection systems with control panels
- Automatic water spray
- Foam applications
- Corrosive water systems

### Approvals

UL-Listed  
Special System Water Control  
Valves, Deluge Type (VLFT)  
Sizes 3" - 10"

FM Approved  
for Deluge Sprinkler Systems  
Sizes 1½" - 8"

Det Norske Veritas  
Type Approval

ABS  
American Bureau of Shipping  
Type Approval

Lloyd's Register  
Type Approval

### Additional Features

- Valve position limit switches
- Local valve position indicator beacon
- Sea water compatibility
- Drain valve/s inlet/outlet

## Operation

(for Illustration Only)

**Valve Closed** (normal conditions)

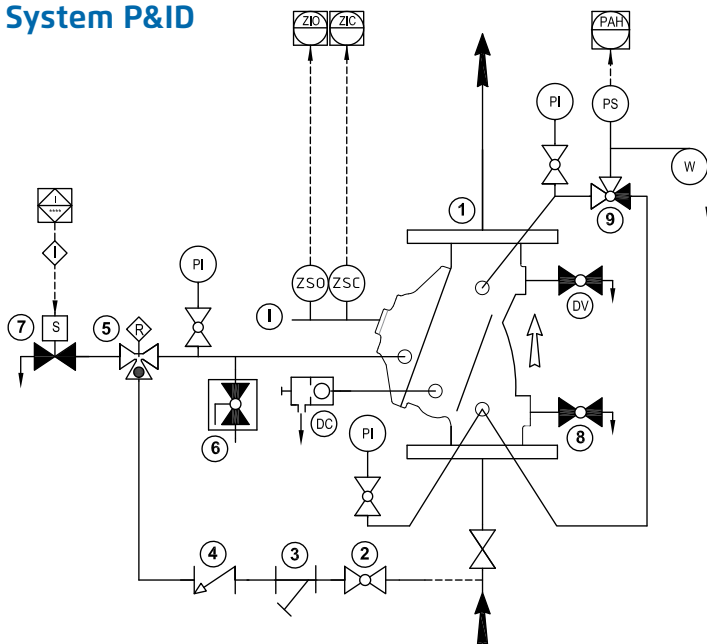

**Valve Open** (fire conditions)

The BERMAD model 400Y-2M is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] and strainer [3], and is then trapped in the control chamber by a check valve [4], manual emergency release [6], Easy-Lock manual reset valve [5], and a solenoid valve [7]. The water pressure trapped in the control chamber of the deluge valve holds the diaphragm against the valve seat, sealing it drip-tight and keeping the system pipes dry.

Under FIRE conditions, water pressure is released from the control chamber, either with the manual emergency release, or by the solenoid switching to the release position in response to a signal from the heat detection system [E] by way of the fire & gas control system [C]. This opens the deluge valve allowing water to flow into the system piping and to the alarm device. The 400Y 2M latches open until reset locally by depressing the Easy-Lock button.

## System P&ID

### Components

- 1 BERMAD 400Y Deluge Valve
- 2 Priming Ball Valve
- 3 Priming Strainer
- 4 Check Valve
- 5 Easy-Lock – Manual Reset
- 6 Manual Emergency Release
- 7 2-Way Solenoid

### Optional System Items

- ZS Limit Switch Assembly
- I Visual Indicator
- DV Additional Drain Valve
- PS Pressure Switch
- W Water Motor Alarm
- PI Pressure Gauge\*
- DC Automatic Drip Check Valve\*
- 8 Drain Valve\*
- 9 3-Way Alarm Ball Valve\*

See also Factory Fitted Options under the Valve Code Designations on the last page

\*Mandatory for FM approval (suffix A in code designations on page 4)

## System Installation

A typical installation of the BERMAD model 400Y-2M, features automatic actuation by way of a 2-Way solenoid. It can also be triggered electrically by a signal from a fire & gas control system or an on-site emergency pushbutton. When open and fitted with a limit switch the valve can send a feedback signal to a remote valve status monitoring system.

## Optional System Items

Water Motor Alarm

Limit Switch

Valve Position Indicator

Pressure Switch

Strainer

(for Illustration Only)

## Suggested Specifications

The deluge valve shall be UL-listed and FM-approved, 25-bar/365-psi rated, with a straight-through, Y-type-body.

The valve shall have an unobstructed flow path, with no stem guide or supporting ribs.

Valve actuation shall be accomplished by a single-piece, rolling diaphragm bonded with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.

The deluge valve shall include an Easy-Lock latching valve, an FM approved 2-Way solenoid valve with a tolerance of 35% below the rated voltage, a Y-type strainer, a ball drain valve, an automatic drip-check with manual override, 4-inch pressure gauges, and a manual emergency release housed in a stainless steel box.

The valve drain socket shall be flanged and have 360-degree swivel.

The valve shall be equipped with a protective-covered, dual-color, rotational position indicator, readable from 50 meters, and with two limit switches enclosed in a protective switch box.

Removing the valve cover for inspection or maintenance shall be in-line and shall not require the removal of the control trim.

The deluge valve and its entire control trim shall be supplied pre-assembled and hydraulically tested by a factory certified to ISO 9000 and 9001 standards.

## Technical Data

### Available Sizes (inch)

- Flanged - 1½, 2, 3, 4, 6, 8, 10, 12, 14 & 16"
- Grooved - 1½, 2, 3, 4, 6 & 8"
- Threaded - 1½ & 2"

### Pressure Rating

- ANSI#150 - 16 bar / 235 psi
- ANSI#300 - 1½" to 10" 25 bar / 365 psi  
12" to 16" 20 bar / 300 psi
- Grooved/Threaded - 25 bar / 365 psi

### Elastomer

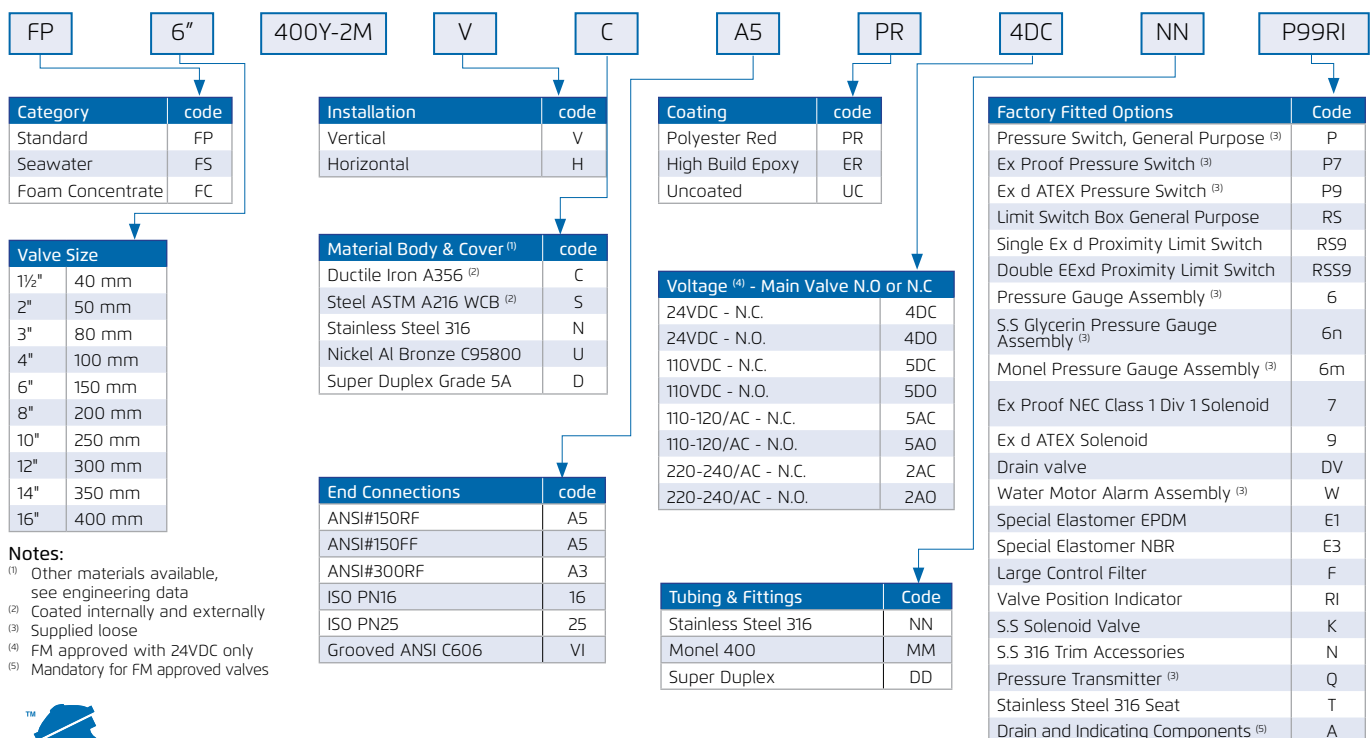

- HTNR - Fabric Reinforced High Temperature Compound - See engineering data
