

Level Control Valve

with Bi-Level Electric Float

IR-450-65-Z

The BERMAD Model IR-450-65-Z Level Control Valve with Bi-Level Electric Float is a hydraulically operated, diaphragm actuated control valve that controls reservoir filling in response to an electric float switch signal, opening at pre-set low level and shutting at pre-set high level.

Features and Benefits

- Line Pressure Driven, Electrically Controlled
- Bi-Level Electric Float Switch
 - On/Off service
 - Low cavitation damage
 - No hydraulic sensing tubes
 - Simplified float installation and setting
- Advanced Globe Hydro-Efficient Design
 - Unobstructed flow path
 - Single moving part
 - High flow capacity
- Fully Supported & Balanced Diaphragm
 - Requires low opening and actuation pressure
 - Progressively restrains valve closing
 - Prevents diaphragm distortion
- External Installation
 - Easy access to valve and float
 - Simple in-line inspection and service

Typical Applications

- Full Range of Reservoirs
- Low Supply Pressure Systems
- Low Noise Generation Requirements
- Energy Cost-Critical Systems
- Systems with Poor Water Quality

[1] BERMAD Model IR-450-65-Z opens at reservoir preset low level and shuts at reservoir preset high level in response to an electric signal received from the float switch as it changes positions.
