

400Y Series

Pneumatically Controlled Deluge Valve with Local Reset

Model FP 400Y - 4M

The BERMAD model 400Y-4M is an elastomeric, hydraulic line pressure operated deluge valve, designed specifically for advanced fire protection systems, and the latest industry standards.

The 400Y-4M is activated by a pneumatic relay valve which latches the main valve open until locally reset. The optional valve position indicator can include a limit switch ideal for Fire & Gas monitoring systems. The 400Y-4M is suitable for systems with open nozzles

Benefits and Features

for water or foam discharge.

Safety and reliability

- □ Time proven, Simple, fail-safe actuation
- Single piece, rugged elastomeric diaphragm seal -VRSD technology
- Obstacle-free, uninterrupted flow path
- No mechanical moving parts
- Latches open: remains open until reset locally

High performance

- Very high flow efficiency
- Straight through flow Y- type body
- Approved for PN25 / 365 psi

Specifically-designed for fire protection

- □ Face-to-face length standardized to ISO 5752, EN 588-1
- Suitable for corrosive fluids and freezing temperatures:
- Pneumatic relay valve
- Meets the requirements of industry standards

Quick and easy maintenance

- □ In-line serviceable
- □ Fast and easy cover removal
- Swivel mounted drain valves*
- * not including 1½" & 2" valves

Typical Applications

- Fusible plug loops
- Automatic water spray systems
- Foam applications
- Corrosive water supplies
- Freezing Environments

Approvals

UL-Listed Special System Water Control Valves, Deluge Type (VLFT) Sizes 3" - 10"

FM Approved for Deluge Sprinkler Systems Sizes 1½" - 8"

Det Norske Veritas Type Approval

ABS American Bureau of Shipping Type Approval

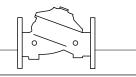

Lloyd's Register Type Approval

Additional Features

- Valve position limit switches
- Local valve position indicator beacon
- Alarm pressure switch
- Sea water compatibility
- Air maintenance device
- Drain valve/s inlet/outlet

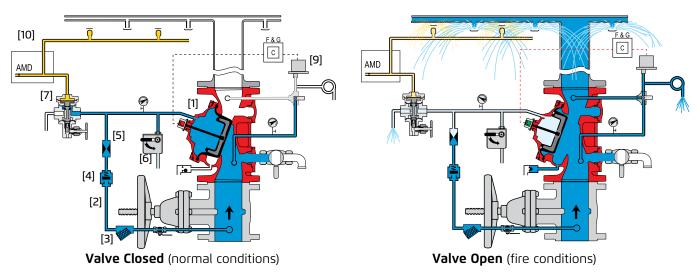

Model FP 400Y - 4M 400Y Series

Operation

(for illustrative purposes only)

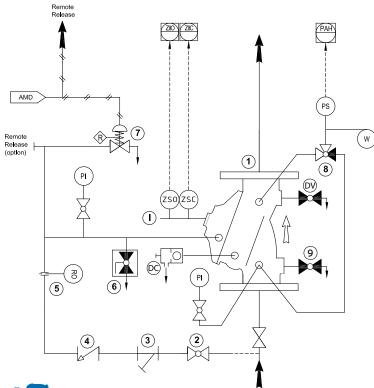

The BERMAD model 400Y-4M is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] strainer [3] and restriction orifice [5] it is then trapped in the control chamber by a check valve [4], manual emergency release [6], and a relay valve (URV-M) [7] that is held closed by pneumatic pressure in the dry pilot line [10]. The water pressure trapped in the control chamber holds the diaphragm against the valve seat, sealing it drip-tight and keeping the system pipes dry.

Under FIRE conditions, water pressure is released from the control chamber by the URV-M opening automatically in response to a decrease in pneumatic dry pilot-line pressure. This latches the 400Y-4M deluge valve open, allowing water to flow into the system piping and to the alarm device [9].

System P&ID

Components

- 1 BERMAD 400Y Deluge Valve
- 2 Priming Ball Valve
- 3 Priming Strainer
- 4 Check Valve
- 5 Restriction Orifice
- 6 Manual Emergency Release
- 7 URV-2-M Relay Valve

Optional System Items

9

ZS	Limit Switch Assembly
1	Visual Indicator
DV	Additional Drain Valve
PS	Pressure Switch
AMD	Air Maintenance Device
W	Water Motor Alarm
DC	Automatic Drip Check Valve*
PI	Pressure Indicator*
8	3-Way Alarm Ball Valve*

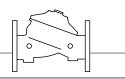

Drain Valve*

*Mandatory for FM approval (suffix A in code designations on page 4)

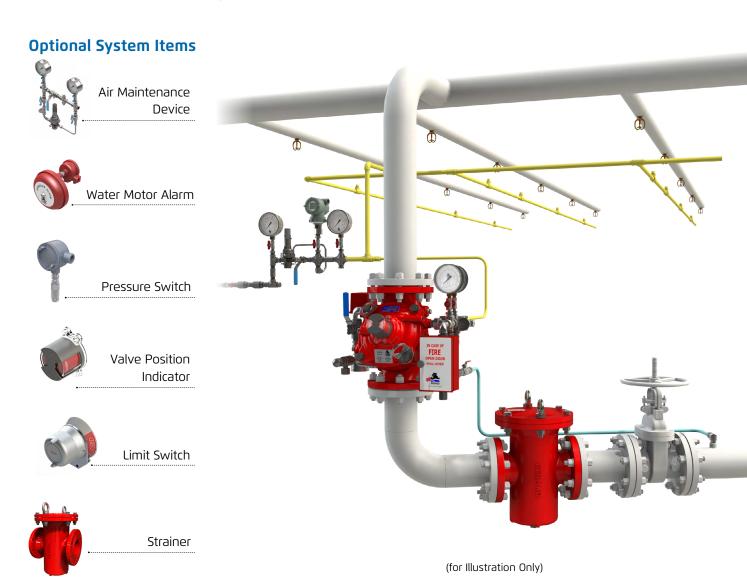

BERMAD Fire Protection ——

Model FP 400Y - 4M 400Y Series

System Installation

A typical installation of the BERMAD model 400Y-4M features automatic actuation via a pneumatic universal relay valve, triggered by a fusible plug loop. When fitted with a limit switch, the valve can send a feedback signal to a remote valve position monitoring system.

Suggested Specifications

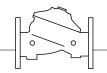

The deluge valve shall be a UL listed and FM approved, 25 bar/365 psi rated, elastomeric-type, straight-through, Y-type-body valve. The valve shall have an unobstructed flow path, with no stem guide or supporting ribs. Valve actuation shall be accomplished by a single-piece, rolling diaphragm bonded with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.

The deluge valve shall include a latching relay pilot valve, a Y-type strainer, a ball drain valve, an automatic drip-check with manual override, 4-inch pressure gauges, and a manual emergency release housed in a stainless steel box. The valve drain socket shall be flanged with a 360-degree swivel capability.

The valve shall be equipped with a protective-covered, dual-color, rotational position indicator, and with two limit switches enclosed in a protective switch box. Removing the valve cover for inspection or maintenance shall be in-line and not require removal of the trim. The deluge valve and its entire control trim shall be supplied pre-assembled and hydraulically tested by a factory certified to ISO 9000 and 9001 standards.

Technical Data

Available Sizes (inch)

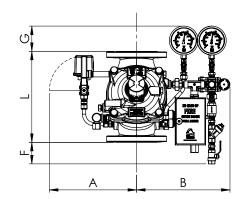

- Flanged 1½, 2, 3, 4, 6, 8, 10, 12, 14 & 16"
- Grooved 1½, 2, 3, 4, 6 & 8"
- Threaded 1½ & 2"

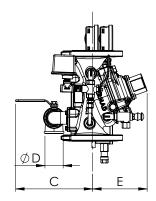

Pressure Rating

- ANSI#150 16 bar / 235 psi
- ANSI#300 1½" to 10" 25 bar / 365 psi
 12" to 16" 20 bar / 300 psi
- Grooved/Threaded 25 bar / 365 psi
