400Y Series

Hydraulic Pressure Control On-Off Deluge Valve

Model FP 400Y - 5DC

The BERMAD model 400Y-5DC is an elastomeric,

hydraulic line pressure operated deluge valve, designed specifically for advanced fire protection systems and the latest industry standards.

The 400Y-5DC is activated by a hydraulically operated relay valve, through which opening and closing of the valve can be controlled either with a remote hydraulic command or with a wet pilot line with closed fusible plugs.

An integral pressure reducing pilot valve ensures a precise, stable, pre-set downstream water pressure.

The optional valve position indicator can include a limit switch suitable for Fire & Gas monitoring systems.

The 400Y-5DC is ideal for systems that combine a remote wet pilot line with a high pressure water supply.

(for Illustration Only)

Benefits and Features

Safety and reliability

- □ Time-proven, simple, fail-safe actuation
- Single-piece, rugged, elastomeric diaphragm seal VRSD technology
- Obstacle-free, uninterrupted flow path
- No mechanical moving parts
- Ensures precise, stable downstream water pressure
- Valve position limit switches (optional)

High performance

- Very high flow efficiency
- Straight-through Y-type body
- Approved for PN25/365psi

Specifically-designed for fire protection

- □ Face-to-face length standardized to ISO 5752, EN 558-1
- Meets industry standards requirements

Quick and easy maintenance

- □ In-line serviceable
- Fast and easy cover removal
- Swivel mounted drain valves*
- * not including 1½" & 2" valves

Typical Applications

- Remote control water spray systems
- Remote hydraulic control
- Foam applications
- High / Fluctuating pressure water supply

Approvals

UL-Listed Special System Water Control Valves, Deluge Type (VLFT) Sizes 3" - 10"

Det Norske Veritas Type Approval

ABS

American Bureau of Shipping Type Approval

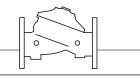

Lloyd's Register Type Approval

Additional Features

- Valve position limit switches
- Alarm pressure switch
- Sea water compatibility
- Drain valve/s inlet/outlet
- For "automatic activation" select BERMAD local or remote reset model

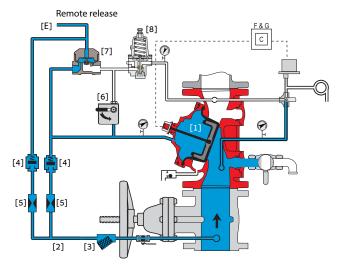

BERMAD Fire Protection ——

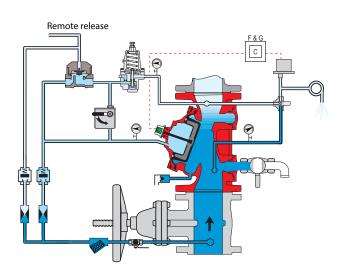

Model FP 400Y - 5DC 400Y Series

Operation

(For illustration only)

Valve Closed (normal conditions)

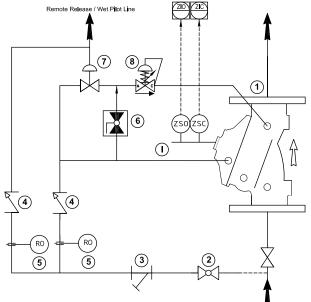

Valve Open (fire conditions)

The BERMAD model 400Y-5DC is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] strainer [3] and a restricted orifice [5] it is then trapped in the control chamber by a check valve [4], manual emergency release [6], and a hydraulic relay valve (HRV) [7] that is held closed by hydraulic pilot line pressure [E]. The water pressure trapped in the control chamber holds the main valve diaphragm against the valve seat, sealing it drip-tight and keeping the system pipes dry.

Under FIRE conditions, water pressure is released from the control chamber, either with the manual emergency release, or by the HRV opening in response to a decrease in hydraulic pilot-line [E] pressure. This opens the 400Y-5DC deluge valve, allowing water to flow into the system piping and to the alarm device. The pressure-reducing pilot valve [8] modulates the main valve to maintain the set downstream pressure. When outlet pressure changes, the pressure-reducing pilot opens or closes in response. This regulates the pressure in the main valve's control chamber, thus modulating the position of the diaphragm seal disk to maintain the set downstream pressure.

System P&ID

Components

- 1 BERMAD 400Y Deluge Valve
- 2 Priming Ball Valve
- 3 Priming Strainer
- 4 Check Valve
- 5 Restriction Orifice
- 6 Manual Emergency Release
- 7 HRV-Hydraulic Relay Valve
- 8 Pressure Reducing Pilot Valve

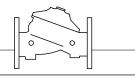

Optional System Items

- ZS Limit Switch Assembly
- I Visual Indicator

BERMAD Fire Protection —

Model FP 400Y - 5DC 400Y Series

System Installation

A typical installation of the BERMAD model 400Y-5DC features actuation via a pressure operated relay valve. When fitted with a limit switch the valve can send a feedback signal to a remote valve position monitoring system. A pressure reducing pilot valve within the control trim ensures a precise and stable pre-set downstream water pressure.

Suggested Specifications

The deluge valve shall be a UL-listed, 25 bar/365 psi rated, elastomeric-type, with a straight-through, Y-type body. The valve shall have an unobstructed flow path, with no stem quide or supporting ribs.

Valve actuation shall be accomplished by a single-piece, rolling diaphragm bonded with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.

The deluge valve shall include a pressure operated relay pilot valve, a pressure reducing pilot valve, a Y-type strainer, a ball drain valve, an automatic drip-check with manual override, 4-inch pressure gauges, and a manual emergency release housed in a stainless steel box.

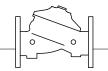

The valve drain socket shall be flanged and have 360-degree swivel.

The valve shall be equipped with limit switches.

Removing the valve cover for inspection and maintenance shall be in-line and not require removal of the control trim. The deluge valve and its entire control trim shall be supplied pre-assembled and hydraulically tested by a factory certified to ISO 9000 and 9001 standards.

Technical Data

Available Sizes (inch)

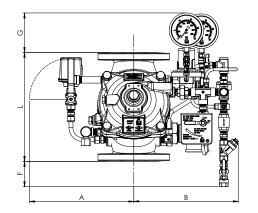

- Flanged 1½, 2, 3, 4, 6, 8, 10, 12, 14 & 16"
- Grooved 1½, 2, 3, 4, 6 & 8"
- Threaded 11/2 & 2"

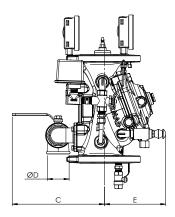

Pressure Rating

- ANSI#150 16 bar / 235 psi
- ANSI#300 1½" to 10" 25 bar / 365 psi 12" to 16" 20 bar / 300 psi
- Grooved 25 bar / 365 psi
- Threaded 25 bar / 365 psi
- Setting range: 4 12 bar (60 175 psi)

Elastomer
