

Woltman Turbine Meter

Magnetic Drive Dry Type

WPH

Heavy duty and designed to handle high flow rates, the TURBOBAR WPH-Magnetic Drive water meter covers a very wide flow range, and is particularly suited to industrial, waterworks, water distribution, water monitoring, and agricultural applications. Based on the Woltmann principle, the helical blades of the turbine rotate around the axis of flow. TURBOBAR products are long-life, and easy to maintain at low cost.

EEC CLASS B
PATTERN APPROVAL

Features and Benefits

- Removable and interchangeable measuring element
- Dry type register
 - Hermetically sealed
- Includes output option by Dry Contact (Reed Switch) and Opto-Electronic sensor, as standard
 - Digital flow converter device and a digital counter are available on request
- Magnetic transmission keeps the register completely separate from water; only the impeller and transmission shaft contact water
- Meets or exceeds ISO 4064 class B-H
- US gallons registration available on request
- EEC Approval (50-300 mm)

Rotating star for leak detection and electronic calibration

Flow Curve

Main Operating Characteristics

- Pressure Rating: PN 16
- Temperature: 50°C

Data Output Options

Water system management requires reliable data acquisition. The TURBOBAR WPH provides accurate data acquired directly from within the system.

Pulse Generating Options

- The reed switch pulse transmitter is a magnetic on/off switch that makes and breaks electric pulse contact per each unit of flow.
- The Opto-Electronic Sensor (infrared retro-reflective photocell) produces an electric pulse with high pulse-rate capacity. The pulse is transmitted to a converter* that enables instant flow-rate readout, pulse counting, and/or 4-20 mA output.

*Converter available on request.

Data Output Options

Reed Switch

- Switching voltage: 48 VAC/DC max
- Switching current: 0.2 A max
- Switching power: 4 W max

Register with Reed Switch

Opto-Electronic Sensor

- Supply voltage: 5-10 VDC
- Output type: PNP
- Output signal
 - High state: • supply voltage
 - Low state: <0.5 VDC

Installations Recommendation

Installation Considerations

Proper installation helps maximize the accuracy and life-span of the TURBOBAR WPH.

All turbine meters are sensitive to turbulent conditions caused by diameter changes, pumps, tees, valves, etc.

Therefore, install the meter far from these disturbances and according to the following specifications:

- Upstream - 5 diameters min.
- Downstream - 3 diameters min.

Recommendation

Install a strainer upstream of the TURBOBAR WPH to eliminate debris that could damage or stop operation of the measuring element.

Caution

- Prior to installing a TURBOBAR WPH in a new line, flush the line to remove debris.
- Ensure that the TURBOBAR WPH is full of water during measuring.

Ordering Guide

Please specify the requested valve in the following sequence: (for more options, refer to Ordering Guide)
