

Hydraulically Controlled Deluge Valve with Local Reset

Model FP 400Y - 1M

The BERMAD model 400Y-1M is an elastomeric, hydraulic, line pressure operated deluge valve, designed specifically for advanced fire protection systems and the latest industry standards.

The 400Y-1M is activated by a pressure drop in a fusible plug wet pilot line. Once open the 400Y-1M latches open until locally reset.

The optional valve position indicator can include a limit switch suitable for Fire & Gas monitoring systems.

The 400Y-1M is ideal for systems with open nozzles for water or foam discharge.

(for Illustration Only)

Benefits and Features

- **Safety and reliability**
 - Time proven, simple, fail-safe actuation
 - Single piece, rugged elastomeric diaphragm seal - VRSD technology
 - Obstacle-free, uninterrupted flow path
 - No mechanical moving parts
 - Latches open until reset locally
 - Valve position limit switches (optional)
 - Local valve position indicator beacon (optional)
- **High performance**
 - Very high flow efficiency
 - Straight through flow Y- type body
 - Approved for PN25 / 365 psi
- **Designed for fire protection**
 - Face-to-face length standardized to ISO 5752 / EN558-1
 - Designed to meet the requirements of the industry standards
- **Quick and easy maintenance**
 - In-line serviceable
 - Fast and easy cover removal
 - Swivel mounted drain valves *

* for 3" valves and larger

Typical Applications

- Hydraulic remote controlled systems
- Automatic water spray
- Foam applications
- Corrosive water systems

Approvals

UL-Listed
Special System Water Control
Valves, Deluge Type (VLFT)
Sizes 1½" - 16"

FM Approved
for Deluge Sprinkler Systems
Sizes 1½" - 8"

Det Norske Veritas
Type Approval

ABS
American Bureau of Shipping
Type Approval

Lloyd's Register
Type Approval

Additional Features

- Valve position limit switches
- Local valve position indicator beacon
- Sea water compatibility
- Drain valve/s inlet/outlet

Operation

(for Illustration Only)

Valve Closed (normal conditions)

Valve Open (fire conditions)

The BERMAD model 400Y-1M is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] strainer [3], and restriction orifice [5] and is then trapped in the control chamber by a check valve [4], manual emergency release [6] and the easy-lock manual reset valve [7]. The water pressure trapped in the control chamber of the deluge valve holds the diaphragm against the valve seat, sealing it drip-tight and keeping the system pipes dry.

Under FIRE conditions, water pressure is released from the control chamber, either with the manual emergency release, or by a release of water pressure of the hydraulic fusible plug pilot line [8], this increase in flow switches the easy-lock to close releasing pressure from the valve control chamber and thereby opening the deluge valve, allowing water to flow into the system piping and to the alarm device [9]. Once open the 400Y-1M latches open and can only be closed locally by manually depressing the easy-lock reset button.

System P&ID

Components

- 1 BERMAD 400Y Deluge Valve
- 2 Priming Ball Valve
- 3 Priming Strainer
- 4 Check valve
- 5 Restriction Orifice
- 6 Manual Emergency Release
- 7 Easy-Lock – Manual Reset

Optional System Items

- ZS Limit Switch Assembly
- I Visual Indicator
- DV Additional Drain/Test Valve
- PS Pressure Switch
- W Water Motor Alarm
- PI Pressure Gauge*
- 8 Drain Valve*
- 9 3 Way Alarm Test Valve*
- DC Automatic Drip Check Valve*

See also Factory Fitted Options under the Valve Code Designations on the last page

* Items mandatory for FM approval and included by the addition of suffix A in the code designations on page 4

System Installation

A typical installation of the BERMAD model 400Y-1M, features automatic actuation by way of a fall in pressure of a fusible plug wet pilot line. It can also be triggered manually using the local manual emergency release, or by using a remote hydraulic release.

When open and fitted with a limit switch the valve can send a feedback signal to a remote valve status monitoring system.

Optional System Items

Maximum Allowable Wet Pilot line Height Above Valve

Engineering Specifications

The deluge valve shall be UL-listed and FM-approved, 25-bar/365-psi rated, with a straight-through, Y-type-body. The valve shall have an unobstructed flow path, with no stem guide or supporting ribs. Valve actuation shall be accomplished by a single-piece, rolling diaphragm bonded with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.

The deluge valve shall include an Easy-Lock latching valve, a Y-type strainer, a ball drain valve, an automatic drip-check with manual override, 4-inch pressure gauges, and a manual emergency release housed in a stainless steel box. The valve drain socket shall be flanged and have 360-degree swivel.

The valve shall be equipped with a protective-covered, dual-color, rotational position indicator, readable from 50 meters, and with two limit switches enclosed in a protective switch box.

Removing the valve cover for inspection or maintenance shall not require removing the control trim.

The deluge valve and its entire control trim shall be supplied pre-assembled and hydraulically tested by a factory certified to ISO 9000 and 9001 standards.

Technical Data

Available Sizes (inch)

- Flanged - 1½, 2, 3, 4, 6, 8, 10, 12, 14 & 16"
- Grooved - 1½, 2, 3, 4, 6 & 8"
- Threaded - 1½ & 2"

Pressure Rating

- ANSI#150 - 16 bar / 235 psi
- ANSI#300 - 1½" to 10" 25 bar / 365 psi
12" to 16" 20 bar / 300 psi
- Grooved/Threaded - 25 bar / 365 psi

Elastomer

- HTNR - Fabric Reinforced High Temperature Compound - See [Engineering data](#)
