

PRESSURE REDUCING VALVE

WITH HYDRAULIC CONTROL

Model IR-220-50-3W-XZ

The BERMAD Pressure Reducing Valve with Hydraulic Control is a hydraulically operated, diaphragm actuated control valve that reduces higher upstream pressure to lower constant downstream pressure and opens fully upon line pressure drop. It either opens or shuts in response to a remote pressure command.

[1] BERMAD Model IR-220-50-3W-XZ Opens upon pressure drop, and establishes reduced pressure zone protecting laterals and distribution line.

[2] BERMAD Combination Air Valve Model IR-C10

Operation:

The Shuttle Valve ① hydraulically connects the Pressure Reducing Pilot (PRP) ② to the Valve Control Chamber ③. The PRP commands the Valve to throttle closed should Downstream Pressure (P₂) rise above setting and to open fully when it drops below setting. Upon pressure rise command, the shuttle valve automatically switches, allowing pressurization of the control chamber, which causes the main Valve to shut. The Manual Selector ④ enables manual closing.
